

# The InTeenimater 1.9

## *Flavor Pak – Quick Start*

### Installation

The package files included here allow you to customize the InTeenimater to your own personal preferences. The following package files are, however, **entirely optional**. You may install all, some, or none of the package files included in this distribution.

These package files must be installed to the same Downloads folder as the core InTeenimater packages in order to function correctly. See the InTeenimater Installation Guide for more detailed instruction on installing package files into your Sims 2 game.

### Pak Descriptions

Below is a brief description of each package file and how it alters the core behavior of the InTeenimater. Paks marked with an asterisk “\*” denote the author’s recommended picks for the full InTeen experience.

#### Back To School\*

Forces pregnant teens to attend school. Teens over 18 years of age (7 days remaining in the teen life stage) will not be required to attend class, regardless of pregnancy status, unless *No Adult Teens* has also been installed. This pak is incompatible with TwoJeff’s School Bus & Bring Friend Home Dialogs mod.

#### College Admissions\*

Adds the requirement that all teens be at least 18 years of age (7 days remaining in the teen life stage) and have graduated high school with a C grade or better before being admitted to college. This pak restores functionality that was present in earlier versions of the InTeenimater.

This pak should **NOT** be used with *No Adult Teens*.

#### No Adult Teens

With this pak installed, teens give up their InTeenimater-bestowed “adult perks” when turning 18 and revert to their default “maxis-defined” teenage behavior. Teens will no longer graduate - they will remain enrolled in school for the entire duration of their teen years. Teens may, however, apply for college at any time. They will be unable to move-out or follow the adult career track. In addition, teens will no longer be able to marry or move-in unless you have also installed the *No Age of Consent* pak or are expecting a baby with the proposee (similar to how v1.1 of the InTeenimater behaved).

This pak should **NOT** be used with *College Admissions*.

### **No Age Of Consent**

Eliminates the age of consent thereby allowing teens of any age to *Propose... / Marriage* and *Propose... / Move In's* to other teen or adult sims.

### **No Fail Birth Control**

Eliminates the 2% risk of pregnancy when "Safe WooHoo" is in effect. Your sims will be lovin' carefree with this flawless contraceptive in place!

### **No Miscarriage**

Disables automatic miscarriages due to low motive scores. Miscarriages may still be manually triggered via the Biological Clock.

### **No Committed Relationships**

Disables support for multiple "Committed Relationships". Only teens may *Propose | Go Steady*. Adults always *Propose | Engagement*.

### **Residential Graduates\***

Allows graduating young-adults to remain on residential campus lots without being forcibly evicted by the game after 72 hrs. Residential graduates will still transition to an adult and continue to age normally while living on campus. This option only applies to valid university families living in eligible residential housing. Young adults in non-residential quarters (dorms, frat houses, etc.) are unaffected by this flavor pak and will return home upon graduating.

### **Silent Pregnancy (courtesy of Syberspunk)**

Disables the chime when any sim (teen or adult) becomes pregnant. Additionally, this pak removes all *Try for Baby* menus. Pregnancy is only possible through unprotected WooHoo.

### **Risky Runaway\***

Introduces a risk that female runaways may return home pregnant by an attractive stranger or a close friend with whom she is either romantically involved or physically attracted to. Selection of the father and odds of becoming pregnant are weighted by relationship scores, chemistry/attraction, lifetime aspiration, gender preference, fertility, living environment, and chance. This mod also fixes a Maxis bug that prevents a teenage sim from returning home after the first 24 hours (unless it's his/her birthday, the household is moved, or no active sims are on the lot).

### **Risky Sneakout\***

Similar to Risky Runaway, this Flavor Pak introduces a risk that a teen female may become pregnant by the person she is sneaking out with provided their mutual relationship and chemistry/attraction scores are sufficiently high.

### **Risky Honeymoon\***

Introduces a risk for just-married couples who leave on a honeymoon to come home expectant parents. Sims with family aspirations receive an added fertility bonus. In Bon Voyage, this ONLY applies if the married couple does NOT plan a honeymoon vacation.

### **Teen Maternity Fashion Paks (courtesy of Mandie and Foxybaby)\***

Fashion paks expand the available wardrobe selections for pregnant teens and young adults. When these sims become pregnant, the InTeenimater randomly selects from the installed maternity wardrobe sets. You can't explicitly plan teen maternity wear without a compatible third-party hack (i.e. *Pregnancy Wear Any Clothes – InTeenimater Edition* by Squinge).

At present, these paks (D0 and D1) are only applicable to female sims.

### **Childhood Crushes (2 files)\***

Originally published as a stand-alone mod, these package files extend a bit of innocent romance to your child sims by allowing them to develop budding crushes on their peers that will follow them into adolescence. Although this mod does not directly alter the behavior of the InTeenimater, it is included as a bonus addition in this release because of its synergistic behavior.

## **Recommended Third-Party Mods**

The following mods by TwoJeffs are fantastic companions to the InTeenimater and have been carefully crafted to work with it. Although not flavor paks in their own right, they are highly recommend additions to any game.

[Autonomous Casual Romance](#)

[Sim Blender](#)

[College Adjuster](#)

[Triplets and Quads](#)

## **Revision History**

*1.9 – October 18, 2017*

### **New Features and Enhancements**
